## Visitor Management System

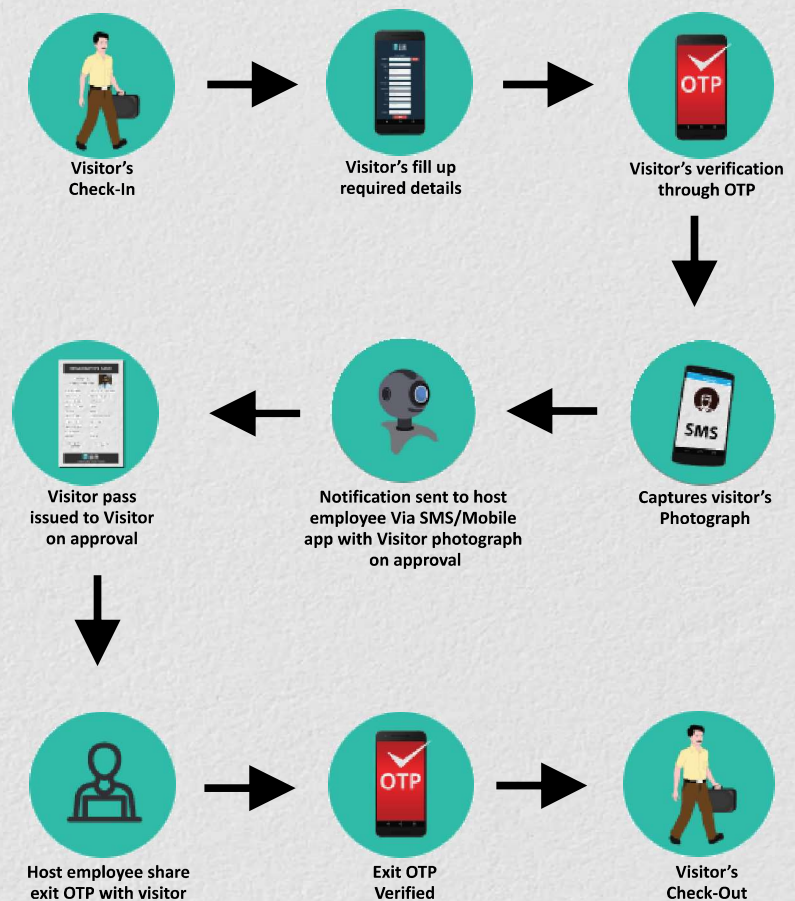

Visitor Management System (VMS) is meant for controlling in/out traffic of a building/premises through web/mob based software application developed by our in-house experts. It can also handle large amounts of visitor data and even handle pre-scheduled or unscheduled visits. VMS manages your visitor traffic quickly and efficiently making it a powerful and centralized security system with advanced database management features.

VMS Registration Desk

Visitor Management Application

Visitor Management System

VMS is an access control application to check and regulate entry/exit of persons in the premises. We need to control the entry of visitors at the reception area, the designated place and capture his data base to facilitate making of his entry pass with the explicit permission of the person with whom meeting is allowed. Main features of VMS are:

- Captures visitor's data including photograph and mobile numbers
- Manage and track visitors
- Data base is electronically operated and managed
- Allows free-flow entry for pre set engagements or appointments
- Acts as an electronic token system
- Record/Recover data using registered mobile numbers
- Use of OTP based protocols for security of visitor's information
- Retrieve data of visitors from database for subsequent visits to avoid duplicacy/delays in operations
